Directions (Q. 206-215): In the following passage there are blanks, each of which has been numbered. These numbers are printed below the passage and against each, five words are suggested, one of which fits the blank appropriately. Find out the appropriate word in each case.

The Right of Children to Free and Compulsory Education (RTE) Act, 2009, which came **(206)** effect in April this year, is meant to transform the education sector and take India closer to the goal of universal schooling. But with admissions to the new academic session just **(207)** the corner, it is fast becoming clear that **(208)** well-intentioned ideas into **(209)** will take some doing. For a start, the guidelines for admissions under the RTE prohibit schools from conducting any sort of student profiling. The stress on a random yet justifiable admission process means that schools will have to resort to something as quirky as a lottery system. However, leaving admission to a good school to pure **(210)** will only incentivise manipulations, defeating the very essence of RTE.

The main problem facing the education sector is that of a resource crunch. The provisions for ensuring universal access to education are all very well, **(211)** we have the infrastructure in place first. Brick-and-mortar schools need to precede open admission and not the **(212)** way around. In that sense, legislators' assessment of ground realities is **(213)** target when they endorse the closure of tens of thousands of low-cost private schools for not meeting the minimum standards of land plot, building specifications and playground area as laid out in the RTE Act. Instead of bearing down **(214)** on private schools for failing to conform to abstract bureaucratic criteria, efforts to bring about universal education should focus on upgrading and expanding the existing government school infrastructure to accommodate all. Only then can we ensure the much-needed supply-demand **(215)** in the education sector.

Directions (Q. 226-240): Read the following passage carefully and answer the questions given below it. Certain words/phrases have been printed in bold to help you locate them while answering some of the questions.

A new analysis has determined that the threat of global warming can still be greatly **diminished** if nations cut emissions of heat-trapping greenhouse gases by 70% this century. The analysis was done by scientists at the National Center for Atmospheric Research (NCAR). While global temperatures would rise, the most dangerous potential aspects of climate change, including **massive** losses of Arctic sea ice and permafrost and **significant** sea-level rise, could be partially avoided.

“This research indicates that we can no longer avoid significant warming during this century,” said NCAR scientist Warren Washington, the study paper’s lead author. “But, if the world were to implement this level of emission cuts, we could stabilize the threat of climate change”, he added.

Average global temperatures have warmed by close to 1 degree Celsius since the pre-industrial era. Much of the warming is due to human-produced emissions of greenhouse gases, **predominantly** carbon dioxide. This heat-trapping gas has increased from a pre-industrial level of about 284 parts per million (ppm) in the atmosphere to more than 380 ppm today. With research showing that additional warming of about 1 degree C may be the threshold for dangerous climate change, the European Union has called for **dramatic** cuts in emission of carbon dioxide and other greenhouse gases.

To examine the impact of such cuts on the world’s climate, Washington and his colleagues ran a series of global studies with the NCAR-based Community Climate System Model (CCSM). They assumed that carbon dioxide levels could be held to 450 ppm at the end of this century. In contrast, emissions are now on track to reach about 750 ppm, by 2100 if

unchecked. The team’s results showed that if carbon dioxide were held to 450 ppm, global temperatures would increase by 0.6 degrees Celsius above current readings by the end of the century. In contrast, the study showed that temperatures would rise by at most four times that amount, to 2.2 degrees Celsius above current readings, if emissions were allowed to continue on their present course. Holding carbon dioxide levels to 450 ppm would have other impacts, according to the climate modelling study.

Sea-level rise due to thermal expansion as water temperatures warmed would be 14 centimetres (about 5.5 inches) instead of 22 centimetres (8.7 inches). Also, Arctic ice in the summertime would **shrink** by about a quarter in volume and stabilize by 2100, as **opposed** to shrinking at least three-quarters and continuing to melt, and Arctic warming would be reduced by almost half.

226. Why has the European Union called for dramatic cuts in carbon dioxide and greenhouse gas emissions?
 1) As global warming is not an issue of concern
 2) As the temperatures may rise almost by an additional one degree and this may lead to severe climate change
 3) As the NCAR has forced the European Union to announce the cuts
 4) As all the nations have decided to cut emissions of carbon dioxide
 5) None of these
227. What would **NOT** be one of the impacts of cutting greenhouse gas emissions?
 1) Temperatures will stop soaring.
 2) Ice in the Arctic sea would melt at a slower pace.
 3) The rise in sea level would be lesser.
 4) All of the above would be the impact.
 5) None of these
228. What would be the impact of unchecked greenhouse gas and carbon dioxide emissions?
 1) The temperature would rise from the current temperature by 2.2 degrees Celsius.
 2) The sea level would rise by about 5.5 inches.
 3) The Arctic ice would stabilize by 2100.
 4) The Arctic ice would reduce by one-fourth.
 5) None of these
229. What can be the most appropriate title of the above passage?
 1) A study of the rise in water level
 2) A study of rise in temperatures
 3) A study of the effects of greenhouse gas emissions
 4) A study of the Arctic region
 5) A study of change in seasons
230. Which of the following statements is true in context of the passage?
 1) At present the carbon dioxide emission is about 284 ppm.
 2) The carbon dioxide emissions will be about 450 ppm at the end of this century if unchecked.

17. 4; **From I:** P > O > N
From II: L > M
 From I and II, either M or N is the shortest. We can't determine who is shorter between the two of them.
18. 3; **From I:** If all of them face the centre, it means if A sits second to the left of B, then B should sit second to the right of A. But here Amit and Arun are different persons. Hence all of them do not face the centre.
From II: Again, suppose all of them face the centre like Ken. Ali sits third to the left of Ken. Now, if Amit sits on the left of Ali, obviously Ken should be his neighbour. But the statement says otherwise. Hence our assumption is disproved. All of them do not face the centre.
19. 5; In I, the sex of T is not known. In II, Q does not figure. Hence we need both the statements to establish the relationship.
20. 2; **From I:** We don't know whether B is to the west or east of C. In fact, it could be in any other direction.
From II:

- Obviously, A is west of B.
 21. 4; **From I:** Bharat has two siblings but we don't know their sex.
From II: This granddaughter may be Bharat's sister or cousin.
 22. 1; I is implicit because only then does the direction to walk make sense. II is not implicit as the statement makes no distinction between the members of the office and the visitors.

23. 2; I is not implicit because of the word “all”. II is implicit because only then does the appeal to switch over make sense.
24. 5; The comparison is possible only when I is assumed. Same for II.
25. 1; I is implicit because of the use of “any” in the statement. II is not implicit. It is possible that the problem can be solved even later. The instruction to contact “immediately” is only for the sake of convenience of the customer.
26. 4; I would be implicit if the statement said “Use *only* our medicine ...”. Again, the instruction to use is only of an advisory nature, not mandatory. Hence II is not implicit.

In each step, one word gets arranged from the left and one from the right. Note that words starting with vowels get arranged from the left and those starting with consonants get arranged from the right. This goes on in such a manner that finally we have vowel-starting words arranged in reverse alphabetical order followed by consonant-starting words arranged in reverse alphabetical order.

II $y^{1/3} \times 14 = 294 \div y^{2/3}$

$$\begin{aligned} \Rightarrow y^{1/3} \times y^{2/3} &= \frac{294}{14} \\ \Rightarrow y^{1/3} \times y^{2/3} &= 21 \\ \therefore y &= 21 \end{aligned}$$

Clearly, $x < y$

118.4; I $\frac{12 \times 4}{x^{4/7}} - \frac{3 \times 4}{x^{4/7}} = x^{10/7}$

$$\Rightarrow \frac{48}{x^{4/7}} - \frac{12}{x^{4/7}} = x^{10/7}$$

$$\Rightarrow \frac{48 - 12}{x^{4/7}} = x^{10/7}$$

$$\Rightarrow 36 = x^{10/7 + 4/7} \Leftrightarrow 36 = x^2$$

$$\therefore x = \sqrt{36} = \pm 6$$

II $y^3 + 783 = 999$

$$\Rightarrow y^3 = 999 - 783 \Leftrightarrow y^3 = 216$$

$$\therefore y = \sqrt[3]{216} \leq 6$$

Clearly, $x \leq y$

119.3; I $\sqrt{500}x + \sqrt{402} = 0$

$$\Rightarrow \sqrt{500}x = -\sqrt{402}$$

$$\therefore x = -\sqrt{\frac{402}{500}} = -\sqrt{\frac{400}{500}} = -0.9$$

II $\sqrt{360}y + (200)^{1/2} = 0$

$$\Rightarrow \sqrt{360}y = -\sqrt{200}$$

$$\therefore y = -\sqrt{\frac{200}{360}} = -0.74$$

Clearly, $x < y$

120.3; I $(17)^2 + 144 \div 18 = x$

$$\Rightarrow x = 17^2 + 144 \times \frac{1}{18}$$

$$\therefore x = 289 + 8 = 297$$

II $(26)^2 - 18 \times 21 = y$

$$\Rightarrow y = 26^2 - 18 \times 21$$

$$\therefore y = 676 - 378 = 298$$

Clearly, $x < y$

121.3; Let the present age of Ram and Rakesh be $6x$ and $11x$ years respectively,
4 years ago,

$$\frac{6x - 4}{11x - 4} = \frac{1}{2}$$

$$\Rightarrow 12x - 8 = 11x - 4$$

$$\therefore x = 8 - 4 = 4$$

$$\therefore \text{present age of Rakesh} = 11 \times 4 = 44 \text{ yrs}$$

After five years, Rakesh's age = 49 yrs

122.5; $2\pi r = 88$ (smaller circle)

$$\therefore r = 14 \text{ m}$$

$$2\pi R = 220 \text{ m (larger circle)}$$

$$\therefore R = 35 \text{ m}$$

Difference between their areas

$$= \pi(R^2 - r^2) = \frac{22}{7}(35^2 - 14^2)$$

$$= \frac{22}{7} \times 49 \times 21 = 22 \times 7 \times 21 = 3234 \text{ sq. m.}$$

123.3; Sum of adjacent angles of a parallelogram = 180°

$$\therefore \text{one angle of triangle} = \frac{2}{3} \times 180 = 120^\circ$$

$$\text{Sum of remaining two angles} = 180 - 120 = 60^\circ$$

$$\therefore \text{second largest angle} = \frac{60}{12} \times 7 = 35^\circ$$

124.1; Ratio of their investments = R : M : P = 50 : 45 : 54

- Then Raghu invested $\frac{17880 \times 50}{149} = ₹6000$
125. 2; Ajay's score = $63 + 30 = 93$
 Rahul's score = $93 - 15 = 78$
 Manish's + Suresh's score = $63 \times 3 - 78 = 189 - 78 = 111$
126. 4; Let the number be x.
 $\therefore 53\% \text{ of } x = 676 - 358 = 318$
 $\therefore x = 600$
 $\therefore 23\% \text{ of } x = 138$
 $\therefore \text{three-fourths of } 138 = 138 \times \frac{3}{4} = 103.5$
127. 3; Speed of the tractor = $\frac{\text{Distance}}{\text{Time}} = \frac{575}{23} = 75 \text{ km/hr}$
 $\therefore \text{Speed of the bus} = 50 \text{ km/hr}$
 $\therefore \text{Speed of the car} = \frac{9}{5} \times 50 = 90 \text{ km/hr}$
 $\therefore \text{Distance covered by car in 4 hours} = 4 \times 90 = 360 \text{ km}$
128. 4; Principal = $\frac{\text{Simple Interest} \times 100}{\text{Time} \times \text{Rate}}$

 $\therefore \text{Compound Interest}$
 $= \text{Principal} \left[\left(1 + \frac{\text{Rate}}{100} \right)^{\text{Time}} - 1 \right]$
 $= 10000 \left[\left(1 + \frac{4}{100} \right)^2 - 1 \right]$
 $= 10000 \left[\left(\frac{26}{25} \right)^2 - 1 \right]$
 $= \frac{10000 \times 51}{625} = \text{Rs } 816$
129. 5; First selling price = $\frac{54000 \times 92}{100} = \text{Rs } 49680$
 Second selling price = $49680 \times \frac{110}{100} = \text{Rs } 54648$
 $\therefore \text{Profit} = 54648 - 54000 = \text{Rs } 648$
130. 2; 2 men = 2 women
 1 man + 1 woman = $\left(\frac{3}{2} + 1 \right)$ women = $\frac{5}{2}$ women
 $\therefore M_1 D_1 = M_2 D_2$
 $\Rightarrow 3 \times 4 = \frac{5}{2} \times D_2$
 $\therefore D_2 = \frac{3 \times 4 \times 2}{5} = \frac{24}{5} \text{ days}$

133. 4; Total number of employees in the year 2007
 $= 650 + 400 + 500 + 150 + 650 + 500 + 700 + 600 = 4150$
 Total number of male employees working in Company C over all the years together
 $= 350 + 550 + 350 + 650 + 400 = 2300$
 $\therefore \text{Required percentage} = \frac{2300}{4150} \times 100 \approx 55\%$
134. 1; Total number of handicapped candidates in the Company B in the year 2004
 $= \frac{250 \times 20}{100} + \frac{450 \times 30}{100} = 50 + 135 = 185$
135. 1; Required ratio = $550 : 250 : 400 = 11 : 5 : 8$
136. 3; Percentage increase = $\frac{80 - 55}{55} \times 100 = \frac{25}{55} \times 100 \approx 45$
137. 2; Required ratio = $85 : 90 = 17 : 18$
138. 1; Total number of qualified students from school Q in all the years
 $= (60 + 55 + 80 + 90 + 75 + 85) \times 100 = 44500$
 $\therefore \text{Required difference} = 44500 - 14500 = 30000$
139. 5; Number of qualified students from school P in all the years
 $= (85 + 80 + 95 + 65 + 40 + 90) \times 100 = 45500$
 Number of qualified students from both schools together in the year 2006 and 2007
 $= (80 + 55 + 95 + 80) \times 100 = 31000$

140. 2; Required number of qualified male students
 $= 60\% \text{ of } (45500 + 44500)$
 $= \frac{90000 \times 60}{100} = 54000$

(201-205):

“he” in sentence (B) is used for “The friend” in sentence (C). Hence (B) must follow (C). Playing piano and a dancing woman, as mentioned in sentence (E), is what the author thinks as a waste, of his money stated in sentence (A). Sentence (D) is giving the introduction of the topic. Hence the correct sequence is DAECB.
